

Craft Tahquitz Alpha Install Guide

1. Download and unzip the zip file.

Make sure the extracted folder contains all of the files directly inside it. If they are all nested in a subfolder, move the subfolder out of the extracted folder and use it instead.

2. Copy the extracted folder (or subfolder).
3. Find the .minecraft folder on your filesystem. Read below to see how to find it on MacOS vs Windows:

MacOS

1. Go to your home folder, aka /Users/(your_username).
2. Go into the subfolder labeled Library/Application Support/, and look for a folder labeled either minecraft or .minecraft.

Windows

1. Press the **Windows** key + **R** at the same time to bring up the "Run" dialogue.
2. Type "%appdata%" (including the percent signs) into the box, then click "ok" or press **Enter**.
3. This will open up the file folder C:/Users/(your_username)/AppData in File Explorer. Check this folder to see if the folder .minecraft is present. If not, go to the Roaming subfolder and check there.

4. Once you have found the .minecraft folder, go into the saves subfolder, and paste the Craft Tahquitz Alpha folder into it.
5. Launch Minecraft in version 1.20.1.

If you don't currently have a Minecraft installation for this version, you can make one like so:

1. In the Minecraft launcher, click the "Installations" tab.
2. Click "Create New Installation", and in the menu that appears, change the "Version" option to "release 1.20.1"
6. In the world selection screen, scroll until you find the Craft Tahquitz Alpha.
