

Craft Tahquitz Skin Install Guide

Along with the Craft Tahquitz Alpha, you should have a set of Scouting-related skins to use in-game. To import them into Minecraft, do the following:

1. In the Minecraft Launcher, click the "Skins" tab.
2. Click "New Skin", and in the new menu that appears, click "Browse" under the "Skin File" option.
3. Navigate to the folder where the skins are located (it will be in the same top folder as the Alpha).
4. Choose the skin file you want to upload, select it, then click "ok" or "open" in File Explorer/Finder.
5. Name the new skin whatever you want, then click "Save & Use".
